

Data Sheet

Shut-off ball valve Type **GBC (90 bar)** and **GBCT (140 bar)**

For CO₂ application

**GBC
(90 bar)**

**GBCT
(140 bar)**

Danfoss shut-off ball valves, type GBC (90 bar), GBCT (140 bar) are manually operated shut-off valves for CO₂ refrigeration systems, in order to open and to shut off inner flow path by operating the valve spindle.

The valves are specifically designed for intrinsic standstill security, meaning that the valves can withstand pressures normally arising when the refrigeration system is shut off, i.e. during serving or during unexpected power failure.

The valve structure and materials are designed and tested specifically for use with CO₂ refrigerant.

GBC (90 bar) valves are designed to use in subcritical CO₂ refrigeration systems. GBCT (140 bar) valves are approved for use in transcritical CO₂ systems.

Features

Features of GBC (90 bar)

- Maximum working pressure: 90 bar / 1305 psig
- Applicable for subcritical CO₂ refrigeration systems
- Bidirectional flow
- Bleed hole design to prevent liquid entrapment when the valve is closed
- Able to isolate both directions during service
- Sealing material especially for CO₂ to ensure long term product reliability
- Stainless steel body with Cu-plated stainless steel tube - easy and fast brazing for systems with copper piping
- Available of access port version for all sizes
- Meet demand for lead-free and full RoHS compliance
- UL/cUL Listed, complies with Pressure Equipment Directive 2014/68/ EU

Features of GBCT (140 bar)

- Maximum working pressure: 140 bar / 2031 psig
- Applicable for transcritical CO₂ refrigeration systems
- Bidirectional flow
- Bleed hole design to prevent liquid entrapment when the valve is closed
- Sealing material especially for CO₂ to ensure long term product reliability
- Version with reinforced copper-iron tube extensions to allow easy torch-brazing installation for systems with K65 piping
- Version with stainless-steel butt welding connections, suitable for systems with stainless-steel piping
- Available of access port version for all sizes
- UL/cUL Listed, complies with Pressure Equipment Directive 2014/68/ EU

Applications

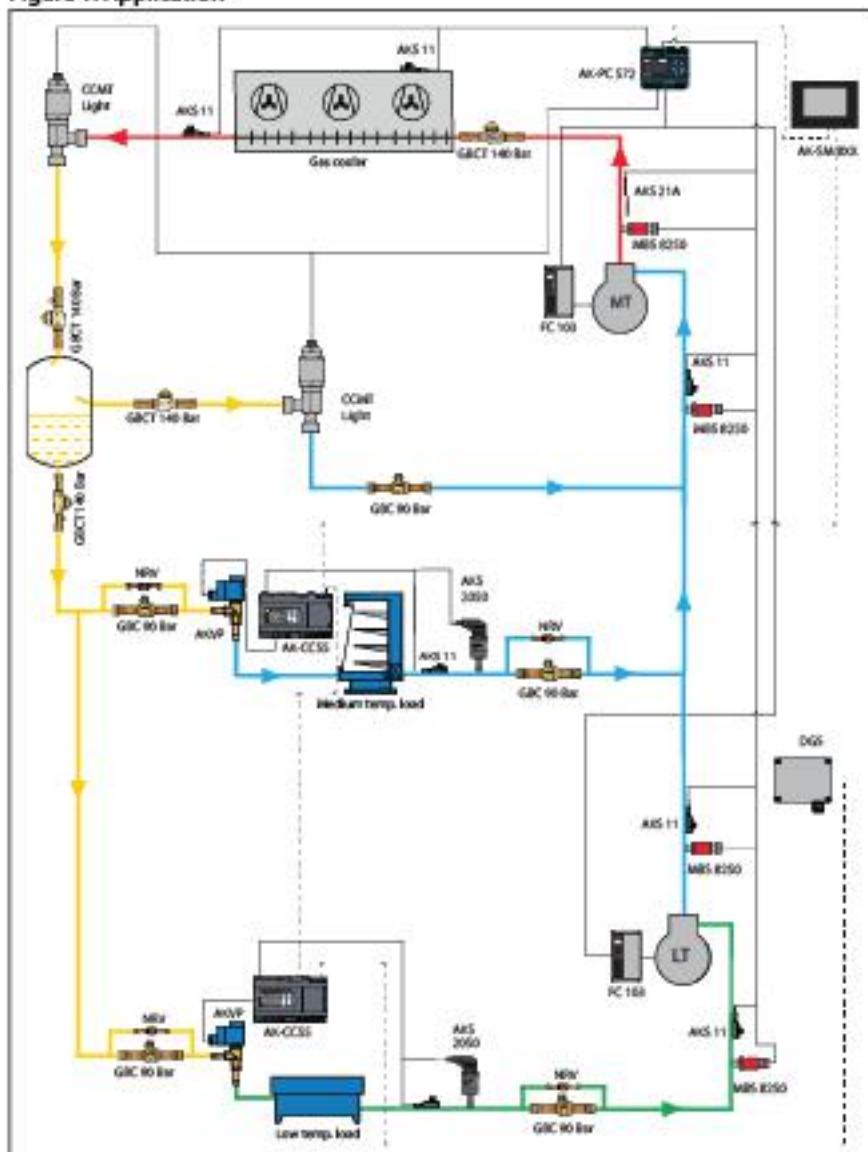

Typical applications for CO₂ ball valves are:

- Display cases
- Cold rooms
- Rack/Pack units

Danfoss CO₂ ball valves are designed for the following refrigerant cycles:

- GBC with PS = 90 bar, Cu-plated stainless steel connections equipped, for subcritical systems
- GBCT with PS = 140 bar, copper (K65) / stainless steel connections equipped, for transcritical systems

Figure 1: Application

- HP High Pressure (120-140 bar)
- HP Receiver Pressure (60-90 bar)
- LP Suction Pressure MT (35-55 bar)
- LP Suction Pressure LT (25-30 bar)

Media

Table 1: Media

Refrigerants	R744 (CO ₂)
Refrigerant oil	POE,PVE,PAG (Not compatible for Mineral oil and PAO)

 NOTE:

For the application use with R744 as part of a secondary loop or cascade:

1. The design pressure of the refrigerant containing component is not less than the design pressure of the associated components.
2. The component is not provided with any pressure relief or pressure regulating relief valve and that a sufficient number of valves having capacity deemed adequate shall be field installed on the refrigeration system.
3. When the refrigeration system is de-energized, venting of R744 may occur through the pressure regulating relief valves, and may need to be recharged, but the valve should not be defeated or bypassed.
4. A sufficient number of pressure relief and pressure regulating valves may need to be provided based upon system capacity and located such that no stop valve is provided between the relief valve and the parts or section of the system being protected.

Product specification

Technical data

Table 2: Technical data

Technical data	GBC	GBCT
Max. working pressure	90 bar / 1305 psig	140 bar / 2031 psig
Media temperature range	-40 °C - 100 °C / -40 °F - 212 °F	-40 °C - 149 °C / -40 °F - 300 °F
Flow direction	Bi flow	Bi flow
Isolation orientation during service	Bi-directional	Uni-directional (following GBCT instruction)
Environmental transport/storage temperature and humidity	-40 - 65 °C / -40 - 150 °F. Air humidity: RH<95%	

Mounting of GBCT:

Danfoss recommends that GBCT valves are installed so that the HP side is oriented towards the highest pressure side of the system when the valve is in the closed position. The ball valve will only internally seal in closed position when flow direction is from HP to LP.

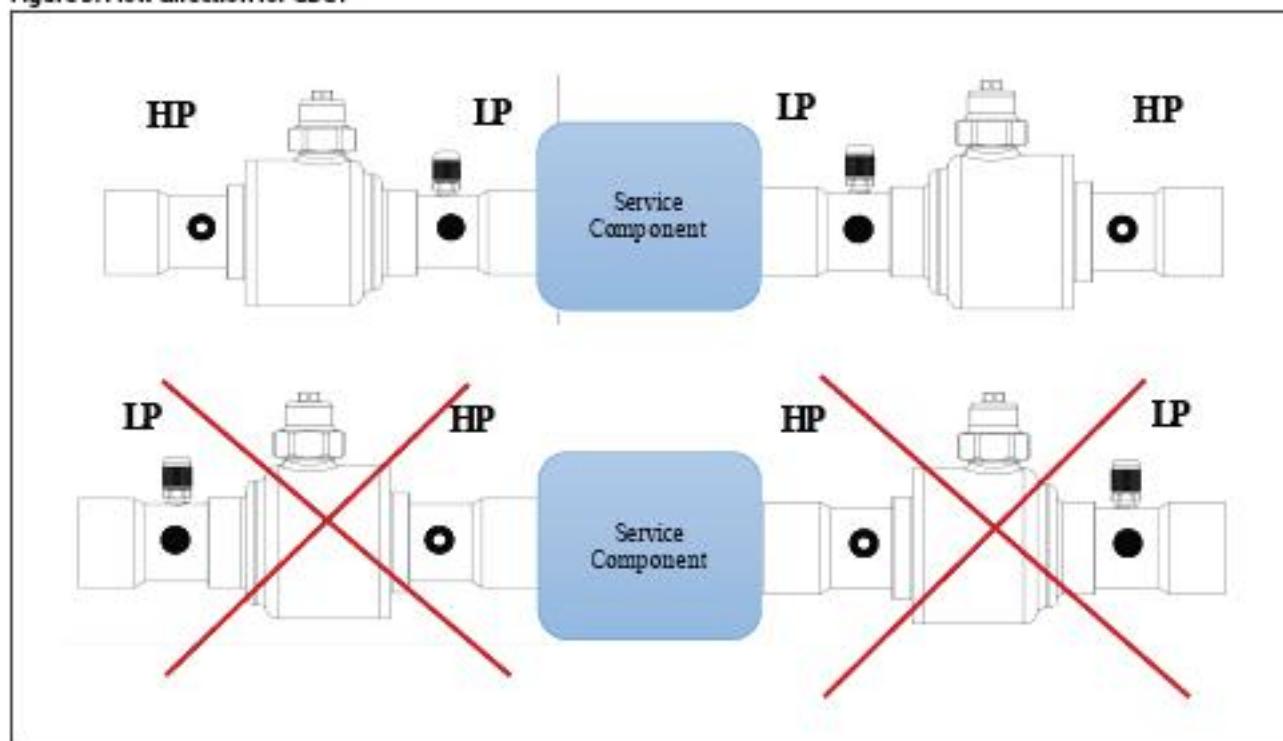

Figure 2: Marking of GBCT

Table 3: Marking of GBCT

Inscription	Explanation
"HP"	Indicates where the bleed hole of ball is located and Danfoss recommends the HP side is oriented towards the highest pressure side of system when valve is in closed position.
"LP"	Indicates the side without bleed hole and shall be oriented towards the low pressure side of system when valve is in closed position.

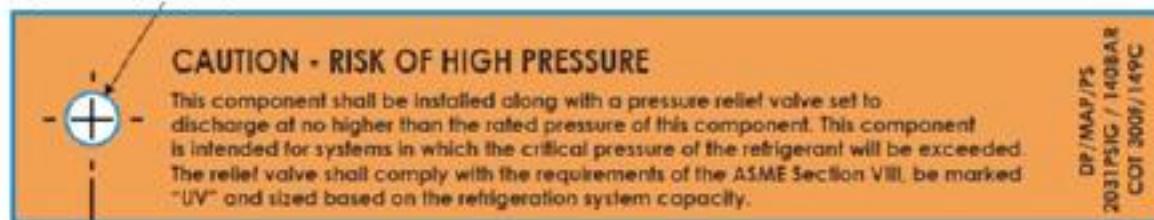

Figure 3: Flow direction for GBCT

GBCT CAUTION - RISK OF HIGH PRESSURE

Do not close with CO₂ liquid temperature below ambient. This component shall be installed along with a pressure relief valve set to discharge at no higher than the rated pressure of this component. This component is intended for systems in which the critical pressure of the refrigerant will be exceeded. The relief valve shall comply with the requirements of ASME Section VIII, be marked "UV" and sized based on the refrigeration system capacity. An orange Hanging tag is added on all valves as per requirement of UL certificate.

Figure 4: Hanging tag of GBCT

Identification

Relevant product data is available on the product and box label. An example of a box label and product label are shown, including an explanation of the content.

Figure 5: Box label

Design and materials

Direct flow gives maximum through-flow with minimum pressure drop across valve. The combination of laser-welded valve body (2) and valve tail (4), ball seat/seal (3), double O-ring seal in spindle (6), and cap seal (7) provides the best tightness.

Figure 7: GBC with Cu-plated stainless steel tube

Dimensions

We have chosen to show dimensions of the major versions.

You will find downloadable dimension drawings for individual code numbers on Danfoss store as part of the Visuals tab for individual code numbers.

Shut-off ball valve, type GBC (90 bar) and GBCT (140 bar)

Weights also differ depending on the design of the individual code numbers. Weights are available as part of the technical data for individual code numbers on Danfoss store.
